DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

1. Claim 6 is rejected under 35 U.S.C. 102(e) as being anticipated by Tal et al. (US 5868785). Tal et al. disclose a method of ratcheting the closure of a pair of jaws of an endoscopic grasping tool surgical instrument comprising the steps of: providing a pivotally mounted actuator handle (443) operatively coupled to the jaws, the handle having a drive head (figure 32) which moves distally to effect jaw closure and said drive head having teeth (464) formed thereon; and providing a pawl (462) positioned for engagement with the teeth so as to prevent proximal movement of the drive head after it has moved distally.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Art Unit: 3739

Claims 7 and 12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Tal et al. Tal et al. teach all of the limitations of the claims except the pawl comprising two tines of unequal length. It would have been obvious to one having ordinary skill in the art at the time the invention was made to provide a second tine, since it has been held that mere duplication of essential working parts of a device involves only routine skill in the art.

Response to Arguments

Applicant's arguments with respect to claims 6, 7 and 12 have been considered but are moot in view of the new ground(s) of rejection.

Allowable Subject Matter

Claims 1-5 and 8-11 are allowed.
